32 STATEMENT

33  
34 This bill would require the Department of Environmental  
35 Protection and the Board of Public Utilities, or any other State  
36 agency to use a 20-year time horizon to calculate the global  
37 warming potential used to measure the global warming impact of  
38 greenhouse gasses. The bill would also require the Department of  
39 Environmental Protection or the Board of Public Utilities, or any  
40 other State agency to use the most recent version of the  
41 Intergovernmental Panel on Climate Change’s (IPCC) Assessment  
42 Report, or a substantially similar report, when relevant.  
43 Additionally, the bill would require the Department of  
44 Environmental Protection and the Board of Public Utilities, or any  
45 other State agency to use the lowest discount rates that are  
46 consistent with federal guidelines when performing a  
47 socioeconomic impact analysis pursuant to the “Administrative  
48 Procedure Act.”

1 Different greenhouse gases can have different effects on the  
2 Earth's warming, based on the gas's ability to absorb energy, and  
3 how long the gas stays in the atmosphere. The "global warming  
4 potential" was developed to allow comparisons of the global  
5 warming impacts of different gases, and specifically measures how  
6 much energy the emissions of one ton of a gas will absorb over a  
7 given period of time relative to the emissions of one ton of carbon  
8 dioxide. The larger the global warming potential number, the more  
9 that a given gas warms the Earth.

10 The United States primarily uses the 100-year global warming  
11 potential as a measure of the relative impact of different greenhouse  
12 gases; however, some scientists use a 20-year timeframe. A gas  
13 that stays in the atmosphere for a short amount of time will have a  
14 smaller global warming potential when measured over a 100-year  
15 span than when measured over a 20-year time horizon, and  
16 inversely, a gas that stays in the atmosphere for a long amount of  
17 time will have a smaller global warming potential when measured  
18 over a 20-year time horizon as opposed to a 100-year time horizon.

19 Using the 20-year time horizon furthers a policy to address the  
20 impacts of global climate change immediately, due to concerns  
21 about how short terms changes in climate may create runaway  
22 impacts on temperatures in the future. Current scientific research  
23 increasingly raises concern for the potential for irreversible changes  
24 in the progress of global climate change, such as the release of  
25 methane from frozen tundra that could lock in the worsening of  
26 global climate change.

27 The IPCC is the international body for assessing the science  
28 related to climate change. The IPCC was set up in 1988 by the  
29 World Meteorological Organization and United Nations  
30 Environment Programme to provide policymakers with regular  
31 assessments of the scientific basis of climate change, its impacts  
32 and future risks, and options for adaptation and mitigation. IPCC  
33 assessments provide a scientific basis for governments at all levels  
34 to develop climate related policies. IPCC Assessment Reports  
35 cover the full scientific, technical and socioeconomic assessment of  
36 climate change, and undergo multiple rounds of drafting and review  
37 to ensure they are comprehensive and objective and produced in an  
38 open and transparent way.
